PROJECT NAME: Vivid Eco Health (showflat)
DEVELOPER: Vivid Living
DESIGN: Liquid Interiors; Vivid Living

Liquid Interiors launched the Vivid Eco Health showflat in late 2014, which is a first in Sheung Wan, Hong Kong. It won the Best of Category Award for Best Green/Sustainable design from the A&D Trophy Awards 2014 presented by Perspective magazine.

The Vivid Eco Health Show Flat is a 1,200-square-foot apartment designed to improve the health of its residents. The design was a collaboration between Liquid Interiors and Vivid Living, a boutique property developer. Liquid Interiors combined their eco-interior design expertise with Vivid Living's health and wellness philosophy.

The aim of Liquid Interiors is to evolve human space that can meet the day-to-day needs of each occupant. As every city in the world continues to grow, it is inevitable to

adapt the way we live and how we build, to create safe and comfortable living conditions, by surviving air and noise pollution, while living in harmony with the environment.

However, with the extreme pollution in nearby China, Hong Kong is also affected with the poor air and water quality. Other problems relating to food, light, limited space for activities and exercise, comfort

and peace of mind are minimised using the showflat's innovative design as a pilot to Vivid Living's future developments.
